Number 27

Threatening Storm Struck Last Evening

Appearance Looked Like A Cyclone Coming

About eight o'clock last evening there appeared from the north-west one of the most wicked looking storms we have ever seen. Chocolate colored clouds looking mountains rolled eastward with every appearance of a cyclone. When they first appeared the town was enjoying a calm summer evening but within a few minutes the sun was darkened and the town was as black as midnight and tons of dust blew in all directions.

Never was there such a fearsome appearance since the cyclone which struck here years ago and many parents got their children into their cellars for protection. For a time it looked as though everything would be carried away, when the wind struck it was at its worst but as thousands of acres of farm lands passed over town it slightly lessened and the wind calmed down to more like what we had seen accustomed.

According to reports from the west, considerable damage was done around Swiftsmore and points further east.

For a few hours there was great excitement and fear. Unfortunately not a drop of rain fell.

Fortunately very little damage was done around here.

Liberals Elected in B. C. General Election

Conservatives Will Be Official Opposition In House

In the provincial general election in B. C. last Monday the Liberal party under premier Pattullo was returned to power with a big majority.

The standing at last report is Liberals 29, Conservatives 8. The balance for the 11 seats are made up of Commonwealth, Independent and one Labor. Not one Social Credit candidate was elected. In the last house there was not a Conservative in this election they will now be considered the opposition.

The Sletfold Stucco Co. has completed the work on Mr. Jack Hope's residence on Secord St. and has finished a fine piece of work to stucco the building.

Veterans Complain of Firing Returned Men

Several Dismissed From Edmonton Civil Service

At a crowded meeting of returned men held in Edmonton last week-end, a resolution was passed demanding the reinstatement of war veterans dismissed from the Alberta civil service or for a royal commission investigation into their dismissal.

There was also a warning that orderly methods in seeking justice should fall ex-service men must "consider such other methods as may accomplish the objective we have in view."

Telegrams and letters endorsing the resolution were received from 70 units of ex-service men throughout the province.

Last Night's Storm Did Damage West

Fifty Mile Wind Blew From Out of Ground

Reports from last night's storm which struck here indicate that considerable damage was done in several sections west.

The fifty mile an hour wind rose crops out of the ground and disrupted telegraph and power lines from Red Deer east to Stettin and south to central Alberta. Damage was also done to homes on farms and in towns, and motor drivers on roads had great difficulty to get through the dust.

In some sections the storm was followed by heavy rains.

J. J. Miller of Brooks, drew a ticket in the Irish Free State Sweepstakes. Derby. His draw-a-not-starter ticket, wins \$2,350.

DUKE OF WINDSOR

Who was married today to Mrs. Wallis Warfield, on his father's birthday. The church of England officially refused recognition of Rev. A. Jardine to officiate at the marriage ceremony. The Duke is reported to have been in a happy mood throughout the days events.

FAIR AND WARNER

The editor of a country newspaper received from a subscriber the query, "Can you tell me what the weather is likely to be like next week?" In reply he wrote: "It is my belief that the weather next week is likely to be very much like your subscription. The inquirer puzzled his head for an hour over what the editor was driving at, when finally he happened to think of the word 'unsettled.' He sent a cheque the next day.

A fine fall of rain passed over this district last week-end and has made a big improvement in the appearance of the prairie and crops.

Westminster Abbey With Completed Annex

Thousands of Londoners tramped around the old city last week to see the floodlighting on the various famous structures in the British Capital. This picture shows Westminster Abbey west front, and new annex, which was constructed specially for the Coronation.

Redcliff Lad is Called a Cloud Cruising Canadian

"Lucky Joe" Jacobson Has a Splendid Flying Record

In this weeks Thursday Review appears an interesting article up of a Redcliff lad who has made a wonderful record as a skillful handle of an aeroplane. It is about Joe Jacobson whose wife and child still reside in Redcliff.

The article refers to Joe as a cloud cruising Canadian who came an air circus and flying school in Kansas City, and who knows what it feels like to have a motor explode in an aeroplane that is roaring through space at 200 miles an hour.

Reference is made to the time he was on a race from New York to Los Angeles when his "ying wing" went to pieces and he miraculously escaped a barrage of flying metal, "balled out," and drifted easily to earth with his parachute. He has had several close calls and is referred to as "Lucky Joe."

Joe is now 34 years of age and while living here as a boy was prominent in all lines of sport, especially in boxing and tennis riding. His parents still reside on their farm west of town.

To Make Changes In The Sales Tax

Limit Exemptions of Clothing, Food and Farm Machinery

Proposed change in the provincial two per cent. sales tax has been announced by the provincial treasurer. The legislation, introduced at the next session of the legislature to limit exemptions to food, clothing and farm machinery will be abandoned in favor of new collection methods, stated Hon. Mr. Low, adding it was believed the latter proposal would result in larger receipts.

Father Fitzpatrick Goes to New Field

Has Conducted Services Here For Several Years

Rev. Father M. J. Fitzpatrick who has been in charge of St. Patrick's Church, Medicine Hat for the past eleven years has been transferred to the Presbyter parish, north east of Calgary.

Father Michael, who was affectionately known, who has conducted services in St. Mary's church here during his incumbency has been most popular, not only with his flock, but among all who knew him.

Father Fitzpatrick will be most missed and his many friends wish him improved health in his new field.

School of Community Life For The Adults

Will be Opened at Olds From June 24th to July 10th

The opening of the Alberta School of Community Life at Olds on June 24th is an important step forward in education in Alberta. The school is under the direction of the Department of Education, the Olds School of Agriculture and the Department of Education. It will provide a brief opportunity for co-ordinated education for those people of adult years who wish to raise the standard of life. The main objectives of the school are to stimulate the desire for knowledge and to emphasize the need for critical judgement. The school is open to men and women over the age of 18 years who wish to attend, regardless of race, creed or religion.

The duration of the course is from June 24th to July 10th. The classrooms of the Olds School of Agriculture will be utilized for this new venture. Students will live in the school dormitory or can live in the town if they so desire. Cost of room and board in the dormitory from June 24th to July 10th is \$17.00. A registration fee of \$1.00 and a necessary cash registration fee of \$1.00 if the student attends, plus \$1.00 will be applied on the tuition fee of \$5.00.

A special weekend from July 2nd to 4th has been arranged for those who cannot attend the entire course. A prospectus of the Alberta School of Community Life may be obtained from the Department of Education, University of Alberta upon request.

Swimming Pool Annual Meeting Monday Evening

Show Balance on Hand and Elect Officers

Last Monday evening the annual meeting of the Swimming Pool Assn. was held in the Legion reading room. There was a poor attendance but it was decided to reorganize and put forth efforts to get the pool in operation again this year.

Called out by the elected officers that the pool was in a deplorable condition and it would take considerable funds to put it in proper shape to open up again this season. Plans were made for an endeavor to raise the necessary funds to make it possible to renovate the property and get it in operation again.

The financial statement submitted by the Sec. Treas. P. Allison showed a balance of \$44.25 on hand left over from last year.

On motion of W. Campan and J. Johnson a vote of thanks was tendered to the retiring officials for the capable manner in which the pool had been conducted.

The officers were re-elected as follows:

Hon. Pres. - N. Meldrum
Pres. - E. L. Stone
Vice Pres. - J. Hope
Sec. Treas. - B. Allison
Ex. Com. - W. Campan, Chairman, and Dr. Ward, J. R. MacKenzie, W. Hill, H. Campbell, W. Fitzhenry, J. Stratton.

If the officials meet with success to get the pool in operation again in time, it is planned to open it on July 1st with a quite a start.

Mrs. Grace Dickson left last Monday for Ontario where she will visit friends in Toronto and several sections during the summer.

TENDERS

For the caretaking of the Redcliff Swimming Pool will be received and must be submitted to the secretary by Monday evening June 7th. Tenders should be submitted to the secretary, Mr. B. Allison.

THE S. E. GUST STORES

Evolution of The Canning Industry From Early Times To Present Day Methods

Back in 1795 nearly every nation in Europe was fighting France and she had revolutionized the world. The Government needed some method of feeding its armies abroad and its sailors at home. Scarcely raised the sailors' foraging was not always feasible in the Napoleonic campaign. A prize was offered to the Frenchman who would solve the problem. It was won by Nicholas Appert in 1809.

He was the Father of Canning and therefore, the Father of the Tin Can, although his first experiments were performed with glass jars and bottles, closed with cork. Appert's theory, worked out long before Pasteur, is the theory still followed by commercial canners today. He sterilized the food by heat and he sealed the container hermetically. Although his apparatus was crude and awkward, he was painstaking and thorough, and he perfected a theory, and put it to the test that has proved one of the greatest levers to the mankind's comfort and health.

While Appert was thus engaged, an Englishman named Peter Durand obtained a patent in 1810 for a tin plate canister. Now we see the first can emerging out of the laboratory, was cylindrical, like the one we see coloring our grocery and pantry shelves today, but was made of sheet iron, by hand. The tin material was levitely tinned iron sheet. Using shears and a soldering iron, the tin was cut out in circular shapes, which were curved it and soldered its ends together to form the body. Then he made a round piece for the top and the can, bending its edges over a circular mandrel, and soldered this to the top so that air could not enter the food in the can expanded while the can cooled. With the can still hot, a drop of solder closed the top.

With Appert's method and Durand's canister, meat was successfully put up for sea voyages. The canning industry had been started and the can making industry was on its way. Appert, who received a grant of 12,000 francs from Napoleon, had really started four great industries—canning, can manufacture, canning machinery manufacture and can making machinery manufacture that have defeated Nature's parsimony by way of packing out man's foods according to harvesting seasons and at no other time. The tin can places June foods on the January plate.

The new era dawned in America. The Civil War furnished the first need for canned foods and increased their production so much as to inevitably shoot can manufacture up the volume. Although the first cans were made at the beginning of the war. By 1870, the output had increased six fold.

It was at this stage that several inventions of importance in canned foods processing acted to increase the volume of production. The canners were still processing (cooking) by boiling the can for long periods. A Baltimore canner named Isaac Solomon applied an English discovery to the process. He added calcium chloride to the boiling water. His temperature was increased to 240 degrees plus. Overnight, the time necessary for sterilization was reduced from five or six hours down to half an hour. The canner whose kettle capacity would produce 1,000 cans was able to turn out 10,000.

This occurred on the threshold of the Civil War in 1861. That great disturbance gave many people their first taste of canned foods. Soldiers ate them in their bivouacs; sailors on their gunboats; the wounded in hospitals; the country was no longer confined to the sea-land-to-land crowd straggled Baltimore and in New England's Canneries sprang up inland at Cincinnati and Indianapolis. Boston found a market for its canned condensed milk, after having failed for ten years to put it over.

Improvements and incentives in the field of canning machinery also played their part in this expansion.

Now had to be skilled and skilled by hand. E. P. Scott and C. P. and J. A. Chisholm perfected a machine that would shell peas from the pod as fast as 1,000 hand workers. Then Scott went a step further and produced the pea venter, which, by using a pebble principle, laid out the peas of pods and sifted them. Nearly 600,000,000 cans were needed last year to discard all the peas packed in America.

Someone discovered and broadcast the fact that tomatoes, or Love Apples as they were called then,

were not poisonous. Nearly 648,000,000 cans of tomatoes were produced in 1929, with another 19,000,000 added to the tomato juice on top of that.

A machine was perfected that automatically peeled and corered peas. Again volume production of tin cans soared. Improvements in tin cans, in peaches, pears, apples, all had the effect of adding immediately to can production.

Better cans now were being made. The next size was the "open-top" tops and bottoms were crimped on without using solder. Thick rubber gaskets made the can air-tight and the crimping of top and bottom was accomplished by folding them over these gaskets.

And then came the stout forward step of all-development and perfection of the canning industry, the invention of the "open top"—and the can see all about you to-day. This generation of consumers never saw anything else.

Results were convincing enough to warrant the formation of a company devoted to the manufacture and distribution of sanitary cans. The first year was made the first year. In three years a branch plant went up in Indianapolis; later came the Niagara Falls branch. These were purchased in 1908 by the American Can Company.

The canning can was unquestionably the chief factor in bringing tin can production to its present figure of production magnitude, and it was the last achievement of revolutionary spirit in the industrial history of the tin can. The canning industry has come along to adorn and beautify our homes but their chief value has been in the way they have brought practicality, utility and convenience. The perfect vessel for food—its cost and they carry, achieving Appert's dream—keep foods edible over long periods of time. Continued by The New Current Digest From Modern Mechanisms.

Rank And Position

Respected By Prince Talleyrand To Meet Trifling Details

The celebrated statesman, Prince Talleyrand, being the guest of honor at a social gathering with people of rank and position should be taken into consideration and respected even to trifling details. Once he is invited a number of people to dinner. When the soup course was finished, he offered the guests a small beef. First he turned to a Duke who was sitting at his side and asked in a friendly voice: "Your Grace, may I have the honor of offering you some beef?" To the next guest with a gracious smile—"May I have the pleasure of offering you some beef?" To the third in line—in a gentle tone: "Dear Sir, may I offer you some beef?" To the fourth, benevolently—"Then, would you care for some beef?" And to the last guest, a diplomatic attache who was seated at the very end of the table, he called out briefly: "Beef?"—Maggie Dicks.

Shortage Of Flax

Supply Is Totally Inadequate To Meet Industry Needs

With flax selling at almost \$1.50 per bushel and the potential supply totally inadequate to meet the requirements of industry for linseed products, farmers who have clean land on which grain crops usually ripen without great irrigation do well to consider the production of this high priced crop.

When offered the good seed, flax to start in a small way, in order to discover whether conditions are suitable. This is particularly true of flax. The experience thus gained also helps materially in handling flax seed.

Since flax is slower-growing than many weeds, to ensure a good crop it must be seeded on clean land—preferably summer-fallow. It is sown at the rate of two pecks per acre, between the first and the tenth of May.

When the crop of flax hunting was over, it was found that the hunter who had fallen from the mound could be more easily located if he wore a red coat, so most flax hunters now wear red or pink coats.

See Hunt can be taught to stand. 7200

Praises Work Of V.O.N.

President Minister C. G. Power Tells Of Aid Given To His Department

President Minister C. G. Power told the board of governors of the Victoria Order of Nurses that what would be the duty of the department of pensions and national health and its staff of technical and professional men to bring to the people the knowledge of that which is most important to them, that is knowledge of the preservation of their own health.

All information, from that of sanitation to child and maternal welfare, he added, must be brought to the attention of the people, a mission in which the V.O.N. does its work.

The Minister spoke at a luncheon given by Senator George P. Graham, Brockville, re-elected president of the executive council for the 12th successive year.

Officers of the order have no apprehension as to vigorous co-operation work being ultimately taken over and operated by the state, said Miss Elizabeth Smalldale, chief superintendent, in her annual report.

"Governments are yet scarcely ready to assume the responsibility for health nursing although some interesting plans for community service have been evolved here in the United States," she said.

Among plans for the future Miss Smalldale said that an inquiry of the Canadian Nurses' Association a sub-committee had been appointed to discuss of a joint program with the nursing service bureau.

Senator Charles Wilson's report as chairman of the committee and publicity committee, said: "We must create a consumer demand in districts which need and could support a branch, and where no nursing service is now available. In other cases our assistance is needed for financial reasons or because the public is not yet fully aware of the many types of nursing service available."

Berlind Soldiers

Woman Who Established Recreational Centre Dies In Toronto

Widely known by Canadian soldiers who passed her hospital in London in war years, Mrs. Annie E. Eaton, widow of Christopher Eaton, died in Toronto a short time ago.

Mrs. Eaton was the daughter of the late Senator Robert Jaffray. After her only son, Major Jaffray Eaton, of the Grey regiment, was killed in action, Mrs. Eaton established London's Grey House, a soldier recreational centre for Canadian soldiers who were welcomed here just before the outbreak of war.

Project A Success

Although the ducks were not yet complete for the number of cattle and lambs shipped from Western to Eastern Canada to be fed for market under the Dominion cattle and lamb feeding project, 23,312 lambs and 25,251 cattle were transferred to the 29th of May, 1937, for the fiscal year 1936-37, ending on the 31st of that month.

More than 750,000 miles of improved roads made up the highway system of the United States.

A Bit Of String And But One Square

Luxurious lace of undressed beauty is this for or dinner table. A crowd of some kind of patterned pattern are all you need to get started. Though the finished piece gives the effect of two squares, it takes but one, the "key" square repeated, to give this rich effect. Here's a delicious way for years to come whether your choice is a cloth, apron, scarf, infant net or other accessory. In pattern 5848 you will find complete instructions for making the square above, an illustration of it and of all stitches used; material required.

To obtain this pattern send 20 cents in stamps or coin (coin preferred) to Household Art Dept., Winnipeg (Newspaper Dept.), 115 McDermott Ave., Winnipeg.

There is an Alice Brooks pattern book published.

Malnutrition And Heart Trouble

Specific Form Of Disease Is Traced To Nutritional Deficiency

A hitherto unrecognized form of heart disease in the United States caused by malnutrition and a specific treatment for it were described before the annual meeting of the American College of Physicians.

Dr. Rufus W. Wines and Dr. Robert W. Wilkins of Boston, Mass., reported that in 120 of their patients, enough to make it "colloquy common," the specific form of heart disease was found and traced readily to nutritional deficiency. A "rapid and often spectacular cure" resulted from the simple administration of vitamin B, lack of which causes beriberi in Oriental countries.

In the northeastern part of the United States at least, "the disease occurs principally among alcoholics, diabetics and food cranks," they declared. "In its pure form it develops in persons without organic heart disease," but when the two occur together "failure of the heart is often precipitated or aggravated," leading to "collapse of the circulation and death if not treated."

Alcohol, they added, plays only a secondary part in causing the disease since it can be treated adequately by administration of vitamin B or its first fraction, B1, even though use of alcohol is continued. Dr. Russell M. Wilder of the Mayo Clinic, Rochester, Minn., declared in answer to the editor's query that the treatment of diabetes has been reached with the successful clinical use of new types of insulin, such as protamine insulin and modifications of it.

Therefore it was necessary to administer several daily injections of ordinary insulin to keep a diabetic patient alive, he pointed out, whereas with the new type of insulin, a hormone one injection will last for 36 hours or longer.

Agricultural Course

Prof. Macdonald Appointed Director Of Agricultural School At Saskatoon

Professor J. W. G. Macdonald, University of Saskatchewan, has been appointed director of the "Agricultural School" which will be the associate course in agriculture which has been given at the university. He received his training in agriculture at the university with the association with Professor Macdonald, to be responsible for the direction and management of the course. In making this announcement, President W. C. Murray referred to the recent study by Professor K. W. Gordon of the methods adopted by similar schools in Minnesota and Wisconsin. There agricultural schools for students from the farm are organized separately from the degree courses and attract 250 to 400 young men in each state.

Professor Macdonald is well known in the province as a judge of livestock. He received his training at Toronto and at Ames University, Iowa. He is a son of A. J. Macdonald, a prominent farmer of the Melfort district. He recently published a book on animal husbandry.

Our word "can" is derived from the Latin "canis" a Roman implement for winnowing grain by the air-current method.

The greatest endurance records are established not by flares but by those patient souls who listen in on the mill run of radio programs.

The Community Spirit Is More Fully Exemplified In The Rural Districts

New Hybrid Apples

Have Been Distributed Throughout West For Hardiness Test

The Dominion Department of Agriculture tells the story of the breeding it has done in order to produce a hardy apple for the great Canadian Northwest. The late Dr. William Saunders commenced the project in 1887 and a quarter of a century later he published a bulletin describing the results he had obtained. Dr. Saunders used the extremely hardy "Pyrae Baccata," the apple of which is not much larger than a good-sized pea.

The first hybrids were crossed between this apple and a number of commercial sorts. From these crosses were obtained a number of hybrids, all of which had characteristics, about one inch to one and one-half inches in diameter.

Later on a second lot of commercial apples was introduced from varieties like McIntosh Red, Northern Spy and Ontario. These second crosses were still very crab-like in nature but produced fruit up to two and a half inches in diameter.

From these crosses the outstanding successes were obtained—Oman and Columbia, without doubt the best crab-apples of any commercial size growing in Canada and they appear to form a foundation stock for future development.

The third crosses have been distributed throughout the west for a hardiness test. Comparatively speaking, there is at present no commercial apple growing in the Prairie Provinces but if the new hybrids are successful the situation may be much altered in years to come.

The apple crop of the Dominion, which includes Manitoba, Alberta and Saskatchewan, was about \$5 million last year, according to a report by the Agriculture Branch of the Dominion Bureau of Statistics, Department of Trade and Commerce.

Sun Spot Cause Trouble

Disrupt Telegraph And Telephone Services As Well As Radio

Observations made the energy which causes fadeouts in high frequency radio broadcasts and the sun with the speed of light.

When there is an unusually bright sun spot near a sun spot, energy is transmitted to the earth in eight minutes, causing high frequency broadcasts to fade. These fadeouts last from 10 minutes to half an hour. The longest come about every 54 days.

Sometimes similarly, telephone and telegraph service are disrupted and the Aurora Borealis, or Northern Lights, are visible in areas as far south as California. The latter are due to storms in the earth's magnetic field and sometimes may follow the sun in 26 hours the appearance of a large sun spot group.

These disturbances likely will continue for several years. Richardson, staff scientist at the Carnegie Institution's Mount Wilson Observatory, said the maximum of the present 10 or 11 year sun spot cycle probably is two years away.

One of the largest spot groups of all time appeared on the sun the latter part of January. An average of 12 spot groups a day was observed in the February; the largest in the observatory's history. The average dropped to 9.4 a day in March but now has increased to 11 or 12 again.

Claims Descent From Tudors

Man Calling Himself King Anthony Would Like British Throne

The self-styled "King Anthony" Hall, still claiming the throne, sent an "objection" to the Archbishop of Canterbury forbidding him to crown "Albanus Wotton," as is styled King George VI. The former London policeman, who calls himself "King Anthony the First," counters his "objections" in legal phrases but they apparently have no legal status. Hall, 31, British according to the alleged direct descent from the Tudors. In 1926 he sent "The Wottons or Wottons," as they began to call themselves during the Great War, "were not of the royal blood of England. Last Dec. 1 he warned the Duke of Norfolk not to attend the King Edward VIII's coronation.

Special cars should be taken in the vicinity of rooms in which children read and play; because childhood is considered the dangerous age for the crime. Serious defects of vision may result from inadequate or faulty lighting.

On passing through a small town or village, persons from cities can frequently be heard to remark, "How do they ever live in a place like this, with 30 or 40 people to the acre in this burg." The village looks pretty quiet to the chap acquainted with street cars and elevators and is accustomed to inhaling second-hand people fumes in crowded elevators.

There isn't anything very lively looking about the small town and church steeples. Neighbors' cows grazing on the side streets to add to the placidity of it all and nobody seems to be in a hurry in the little towns that provide dwelling places for a great share of Canada's population. For those who thrive on big-time excitement the little places are the worst of all villages.

An incident occurred at Norland recently that perhaps explains why there are people who can live in the vast prairie and the Norland is a small village. Small enough that everyone is acquainted with everyone else. When the family is on one family, the whole village is happy. When tragedy strikes in one place or death claim a Norland home, there isn't a soul on anyone's face. Everybody feels genuinely sorry and try to visitation and comfort the victims of the tragedy as far as possible for those affected.

Not long ago a fire wiped out one of the homes in the village. Not only was the house lost but the furniture and personal effects of the family were lost, leaving them temporarily destitute.

Being a small place, folks didn't take the attitude that after all it wasn't any of their business, leaving them temporarily destitute.

When a small home is built there will be no shortage of labor. Folks will just pile in and help build it and get this family on whom misfortune has frowned look on their feet again.

It isn't so hard to live in a little town or village as things seem. The Norland incident is typical of what would occur in almost any small town.

When people have a real heart interest in one another there isn't the same call for synthetic entertainment. The fact it seems to fall pretty flat when weighed against the pleasure of doing a good turn for a neighbor.—Lindsay Post.

World's Largest Painting

Mural Is Completed For The Paris Exhibition Of 1937

Wielding the largest paint brush in the world, and using a canvas the size of a football field, a team of French sweepers, chuncky, graying Raul Dural has been standing on a step-ladder, in an abandoned iron mine, painting a mural for many months, while Jacques Marguerite, technical adviser to the Louvre, stood below stirring basins full of pigment, water, alcohol and oil with an egg beater.

Last week what, they had been working on was completed, a mural for the Paris Exposition of 1937, "largest painting in the world" showing in brilliant colors of pink, green, yellow, purple and brown the history of electricity from Aristotle to the 20th Century. Mrs. Curtis.

Whether or not any odd-time panacea were bigger, Artial Dural's painting is the biggest, mounting. Already 1,200 pounds of oil and paint have been spread on 850 separate wooden panels to make a picture the size of 30 ft. high, 100 ft. wide. It is the central feature of the Palace of Electricity for the Paris Fair. Already arrangements have been made to remove all the panels and ship them to the U.S. as soon as the Paris Fair closes.—J.M.

Millionaires In Britain

There are 206 "millionaires" in Great Britain according to the latest "Statistical Abstract for the United Kingdom." This class officially includes persons with net worth exceeding £50,000. In the boom year 1929 there were 375 and approximately 200 before the world war. Eighteen more "millionaires" however, have been added to the list since last year.

Some areas of the earth's surface for years do not get enough rainfall to measure, while other sections get several hundred inches annually.

Blizzards in the north, you don't make when you are racing snow.

A Valuable Collection

Articles from Queen Alexandra's Treasury are being displayed. Queen Alexandra, grandmother of George VI, was a young woman and some of her ways of being comfortable in spite of draughts are shown in items of her wardrobe still preserved. One of the most curious is a white kid petticoat, which she wore in the house. Alexandra had it made to protect her knees from the rain. There is a wooden sleeping shawl, so soft and fine it could be folded into a small purse, enough to enable Her Majesty to envelope herself in it while in bed. This shawl, and another like it, was the gift of the Queen's sister, the Empress of Russia and was a favorite possession.

These items, and many others, are being shown in the United States and Canada by Mr. Sam Sides, London fur designer, into whose possession the 145 pieces of the late Queen's personal wardrobe came via court dressmaker to whom the collection had been given.

The countesses of Edward VII's charming Danish queen travelled from England to America in two large trunks, stuffed with furs. Her Majesty's own name, and they include not only articles from her wardrobe, but things she put by in living memory of her royal husband. There is, for instance, the grey suit and fannel trousers which King Edward was wearing the time he was struck down by his fatal illness in 1910.

Among the trousseau items there is the white fur coat Alexandra was wearing when she landed in England March 1, 1883, three days before her marriage. There are the white kid slippers, with elastic laces, size 2, which she wore on her wedding day, and a dainty pink satin apron that some housewife instinctively prompted her to include in her category of things a wife should own. Her Majesty loved her cats, and can be judged by the way in which the carefully packed away her favorite white cat, which she called "Puss." There are also some of her own designs of them and she wore them very well. "She was charming and beautiful," Mr. Sides said of Queen Alexandra. "She could wear clothes in a manner that would teach professional mannequins a thing or two."

Propagate Wild Fowl

Plan to Hatch A Million Ducks A Year in Each Of The Prairie Provinces

Hatching of a million ducks a year in each of the three prairie provinces will be the aim of the newly-formed organization, Ducks Unlimited, which will start soon its program of expending some \$3,000,000 in Canada to preserve and propagate wild life. The plan was proposed by W. G. Ross, K.C., M.L.A., one of the new party.

Mr. Ross was addressing the annual meeting of the Moose Jaw Club following its banquet in the Moose Jaw club. About \$600 had already been raised in the United States to speed "Ducks Unlimited" on its way.

"Eighty-five per cent. of the duck breeding area of the North American continent is in the prairie provinces," said Mr. Ross, as he outlined the non-profit, unincorporated nature of the new project. Newly-hatched ducks may be released at the age of three or four weeks, said Mr. Ross, and from then on are able to care for themselves.

Law For The North

Legal Channels For Collection Of Small Debts To Be Made Available

Life in the far north has become so complex that legal channels for collection of small debts have been opened by the federal government. An influx of prospectors and miners to the Northwest Territories, once the domain of solitary trappers, made the change necessary.

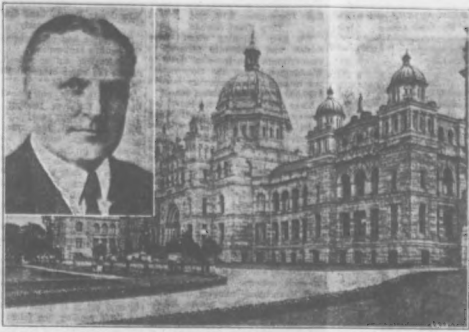

Under the new act-up, district officers, probably medical officers, will be designated as the officers for the collection of a monetary debt to the debtor, the officer having wide powers to arrange a settlement without a court hearing.

The word "unique" cannot properly be used in connection with the words "more" or "less," since it means the only one of its kind.

A day-old Arctic train was headed in Labrador on July 23, 1927, and within three hours, was found in La Rochelle, France.

Romford, England, has only one member in the House of Parliament, though it has 250,000 inhabitants.

BRITISH COLUMBIA TO GO TO THE POLLS IN JUNE

Premier T. D. Pattullo has announced dissolution of the British Columbia Legislature and fixed the Provincial General Election for June 1st. Together with the election a plebiscite will be taken on state health insurance. Above are pictures of Premier Pattullo and the magnificent parliament buildings at Victoria.

A Kindly Incident

Coronation Of King Edward VII. Stands Out By Reason Of A Kind Act

Strange and even cruel happenings associated with past Coronations are recalled so frequently in the roll of English history that the Coronation of Edward VII. in 1902 stands out by reason of a kindly incident.

The aged Archbishop of Canterbury, Dr. Frederick Temple, father of the present Archbishop of York, knelt to do homage to the sovereign, but was unable to rise again to his feet. Edward thereupon left the chair for a moment and gently assisted the stricken prelate to his feet. "God bless you, Mr. God bless you," murmured the Archbishop. It was on account of Dr. Temple's infirmities that the Archbishop of York, then Dr. MacLagan, crowned Queen Alexandra.

Edward and his Queen, Alexandra, were beloved, Edward having achieved a warm place in the affections of England through his diligent service as Prince of Wales during the latter years of the reign of Victoria. It was the special distinction of Edward to have been a substantial support of the Throne before he was called upon to occupy it. He was exemplary in the discharge of his public duties and in his scrupulous detachment from party politics.

The Coronation was postponed by the long-drawn-out war in South Africa. Fixed first for June 26, 1902, another postponement was necessary, the King suffering from peripneumonia, which necessitated an operation.

The King's recovery was rapid and the coronation took place Aug. 9. Though short of much magnificence which would have been added to the three months before by the presence of foreign royalties, the ceremony was performed in Westminster Abbey amid great rejoicings.

Canadian Bacon Popular

Large Amount Imported By United States During Winter

Canadian lean bacon, neatly introduced with fat, is finding favor in United States breakfast tables, judging by recent figures showing increased exports to that country.

Latest statistics indicate United States prices are now inclined to sag due in part to importations of high quality bacon from Poland and in consequence Canadian exports may not be as great in the next few months. In January and February exports of Canadian bacon and ham to the United States aggregated 466,000 pounds compared with 228,500 in the same period of 1926. Along with this some 19,854 live hogs were shipped across the line in the two months period, a considerable increase over the same period of the year before.

In some sections of the United States restaurants and hotels are advertising the serving of Canadian bacon.

The Very Idea

Post Office Clerk: "This letter's overweight ma'am. You'll have to put another three-cent stamp on it." Woman: "Well, of all things, Here I've mailed dozens of letters that were underweight. And now you want to charge me three cents because I'm sending one that's just a snap-out over the limit." The teller. And right at our own post-office, too."

Lynx and tigers are of the same family, and yet as are bitter enemies as dogs and cats.

Market For Canadian Timber

Scottish Buying More From Canada Than At Any Time In History

Scotland, which knows good value when it sees it, is buying more Canadian timber than at any time in its history.

The year 1926 saw the beginning of trade between that country and Canada for ready-made doors. It began with doors of Douglas fir, but now includes some white pine, and has grown so rapidly that last year Canada gained by far the largest share of the Scottish trade in imported doors. Their totals, through Glasgow and Leith, amounted to 87,715, of which Canada supplied 51,760 or roughly 76 per cent. The principal competitors were the United States and Sweden.

There has also been a marked increase in the Scottish consumption of Eastern Canadian spruce. It has, in fact, been the most important of Eastern timbers into the Scottish market, and accounts for three-quarters of the year's imports of Eastern Canadian soft woods—North British Agriculture.

An Old British Law

Feminine Showing On Night Of Any One Named Sny

Mrs. J. Sny, Hoylake, Cheshire, England, announced that she would ask King George VI. as a special coronation favor" to repeal a 200-year-old law under which every person by the name "Sny" may be shot on sight.

There are about 200 Sny's in Great Britain, she said, and all are descendants of the Scottish clan MacDonald, the members of which were outlawed in 1602 for rebellion.

The law never was repealed and, technically, still permits shooting on sight anyone named Sny.

Teacher: "If your father earned four pounds a week and gave your mother three-fourths, what would she have?" Tommy (definitely): "Heart failure."

NEW WINDOW IN NOTRE DAME

Two beautiful stained-glass windows which have been put in Notre Dame Cathedral, Paris, as part of the window scheme. The left window depicts St. Etienne by M. Barillet and at the right is St. Germain by M. Hebert-Breuve.

Canada's Natural Resources

New Wealth Created Last Year To Value Of Almost Two Billion Dollars

Based on the latest available returns, it is estimated that in the development of Canada's natural resources last year was created new wealth to the value of almost two billion dollars. Of this amount agriculture contributed 50 per cent., mining 19 per cent., forestry 15 per cent., the tourist industry 18 per cent., and fur and fisheries together, three per cent.

Canada enjoys as much and as many of the natural and commercial advantages for growth as any country can expect to command. In her farm lands she has an asset that has enabled her to attain first rank as an exporter of wheat and other agricultural products. Although the variety and extent of her mineral deposits are not yet completely known, Canada produces large exportable surpluses of practically all of the important minerals of commerce, and is well supplied with fuels, structural materials, and other non-metallic minerals for domestic requirements. Her forested lands, which cover one and one-quarter million square miles, have made Canada the world's greatest producer of soft wood as well as newsprint, and one of the leading producers and exporters of lumber.

Good stock for chicks is most important regarding to the agricultural extension service of the University of Wyoming. Following are a few things that should be remembered when they should be fed as soon as they will eat, which are usually about 36 hours after hatching. The dry mash mixture is fed on clean paper, little and often, for the first day or two, after which shallow troughs, made of tin, are substituted. The dry mash mixture or chick starter should be kept before the chicks all the time. A dim light in the brooder prevents stampeding and crowding. Cod liver oil is important especially when it isn't suitable for the chicks to run out-of-doors or get an abundance of direct sunlight.

Cattle Exports

Vigorous Uplift In Cattle Shipments During Past Year

The Dominion bureau of statistics reported a vigorous uplift in cattle and meat exports for the fiscal year ended last March 31, noting cattle shipments to other countries were almost double those of the last fiscal period and meat exports about 14 times as great as a year before.

Canada sent abroad 304,054 head of cattle worth \$13,169,954 compared with 338,502 worth \$5,555,850 and sold to other countries meat worth \$26,114,497 compared with \$24,220,322 the previous fiscal year. In addition the country sold abroad dairy produce worth \$14,647,544 compared with \$10,007,451.

The bureau said the increase in shipments of animals was especially pronounced in beef cattle sent to the United States, 264,567 head worth \$9,618,790 compared with 120,174 valued at \$5,997,203 the year before.

Koalas Are Quaint Animals

Efforts Being Made To Preserve Them In The Island Kingdom

The declining census of Koalas, Australia's living teddy bears, is causing the interest of animal lovers in the continent whose efforts are being made to preserve one of the quaint and most attractive members of the animal kingdom.

Koalas are found in eastern and southeastern Australia, but do not occur on any of the neighboring islands or in the western half of the continent. They were probably once the most common animals in the Australian bush, but about 40 years ago a widespread epidemic overtaken them and they died in their thousands.

Koalas have five toes on each foot, and each toe is armed with a curved, barbed "claw." The toes are in groups of two and three, the two claws being in the form of a double sickle. When they are equipped, they climb easily and also to grasp the branches of an eucalyptus tree and pull them down for the purpose of feeding on the leaves.

They never drink water, but are apparently able to obtain enough moisture from feeding on the juicy gum shoots from which commercial eucalyptus oil is extracted.

Koalas are so quaint and attractive little creatures that they are much in demand as household pets. They are very easily tamed, but as they grow older they are careless of the fact that their claws have a needle-like sharpness, which will easily penetrate the thickest and strongest cloth.

In captivity the bears quickly acquire a taste for weak, sweetened tea, and starchy foods. The depravity is the cause of their undoing. If given such things in mistake for food, they soon begin to lose condition, and in a few months die from indigestion. Even when fed only on eucalyptus leaves, they are difficult to keep alive in captivity.

A Paradise Of War

From the El Pardo front in Spain came the story of one of war's parades. The mounted and government soldiers halted their firing to allow squads from both sides to enter no-man's land to gather the dead. The opposing soldiers met over their gruesome task, chatted, and puffed cigarettes fraternally. Then they gathered up the bodies, returned to their trenches and the fighting restarted.

The Genabou, a large South African antelope, never drinks water, but requires the moisture obtained from the succulent bulbous plants on which it feeds.

Preparing The Lawn

Some Valuable Hints In Care And Attention

Just as soon as the soil is dry and firm enough to walk upon after the snow has disappeared is the time to remove the old grass and prepare the new lawn. The first thing to do is to remove all the dead grass by giving the lawn a thorough raking and then the attention should be directed to smoothing up the bare patches by sowing fresh seed. The seed should be broadcast evenly on the bare patches after they have been raked to the depth of two inches. The seed should then be covered lightly with a sprinkling of sifted soil and packed down firmly. The patches should be kept moist, but not flooded, for at least two weeks following the application of a top spray.

Fertilizer is necessary for the lawn and should be applied just as soon as the raking and seeding have been done; and as soon as the fertilizer has been applied it should be well watered in, care being taken to use a fine spray, so that the seed is not dislodged by the water. When the time for cutting arrives, which is as soon as the grass is long enough to require cutting, the mowing operation should be regular, the frequency should be observed, and it is a mistake to allow the grass to grow too tall and then cut it.

Reliable grass mixtures may be obtained from seedsmen but for those people who wish to mix their own, L. C. Young of the Dominion Experimental Farm at Preston, Ontario, has a Canadian mixture of grasses, has lectured on home lawns in the United States, recommends for the new lawn a mixture of four parts Kentucky Blue grass and four parts Red Top at the rate of three to four pounds per 1,000 square feet of lawn. The mixture should be sown in the fall, and the seed should be covered to a depth of one to three pounds per 1,000 square feet. For shady areas, one-third the quantity of Rough-bladed Meadow grass should be added. Failure to grow grass in shady places is due more often to conditions of low fertility and lack of moisture than to the shade itself.

Not Understood Now

People Cannot Appreciate Plagues For Deliverance From Plagues

Many churches worshippers recite the Litany, which is in part, "from plague and pestilence . . . good Lord, deliver us." It is impossible for the worshippers of 1927 to appreciate fully the meaning of these words. For the plague here is not the bubonic plague, but the Spanish influenza epidemic of 1917 to 1918. The average citizen of today knows little of the plague. The last time it occurred was in 1918 in Los Angeles. The epidemic was ended with a loss of 33 lives.

Modern sanitation and public health measures have brought bubonic plague under control. But there was a time, writes David Dietz, here is a time when the plague was a terrible scourge, so deadly that it seems surprising sometimes that the world survives at all.

During the Middle Ages it was known as the Black Death and swept the world from Ireland to China. There is no language in Europe or Asia in which descriptions of the Black Death do not occur, and these descriptions are sufficiently accurate to identify it beyond all question as bubonic plague.

It has been estimated that this epidemic of the Black Death in the fourteenth and fifteenth centuries cost a total of 425,000,000 lives. It was followed by other outbreaks in the sixteenth and seventeenth centuries.

Today we know that it was spread to human beings by fleas from infected rats. Modern sanitation has ended the terror of the Black Death.

Wanted Information

A trio of bright little boys entered the Metropolitan Museum in New York and made for the Egyptian exhibits, where they told an attendant that they had come to see a "good man." He showed them where the mummies were, and they stood in front of them for about 15 minutes, just looking. As they were going out, one of the innocents approached the attendant and asked, "You kill and stuff them yourself?"

The New Yorker.

China and India are the world's leading rice producers, with Japan ranking third. Japan's crops are supplemented by imports of the commodity.

Private bankers first were hoarse in St. Babylon during the time of Nebuchadnezzar, in 600 B.C.

WORLD HAPPENINGS BRIEFLY TOLD

The Ailing (Tasland parliament) was dissolved following a split among the government parties. General elections will be held June 20.

Part of the pay chest of a Roman legion of the early third century, 20,000 coins have been excavated at Dorchester and a selected 1,000 purchased by the British Museum.

Chancellor Hitler has taken no better for four years, according to an article by Otto Dietrich, Nazi press chief, in the National Zeitung of Essen.

A sub-committee of the committee of Imperial defence is to examine various proposals in the production of oil from coal and other materials found in the United Kingdom.

Protestant church elections ordered by Chancellor Hitler as a means of restoring control to church members throughout a general survey will be postponed until autumn.

The Duke of Windsor has taken up residence at York House, St. James's Palace, which was occupied by the Duke of Wales when he was Prince of Wales.

Several crew members of the British steamship Welsh City, managed by the chief steward, were arrested at Hakodate, Japan, charged with taking photographs in the fortified zone around that port.

Congestion of pension applications before the House of Commons pension commission has been eliminated. Departmental officials said that only 501 applications were now before the commission, just enough to keep them active.

The Manitoba government is urged in a resolution by Winnipeg city council to request from the Dominion a loan of \$400,000 for the city and a further \$100,000 contribution for a housing scheme to relieve slum conditions and as an unemployment relief project.

Estate Taxes

Difficult To Find Legal Support For Death Duties

At John J., working hard for forty, fifty or sixty years, managed to accumulate a hundred thousand dollars, by what possible logic it can be established that part of that money—say, if it is some person had their way—should go into the State treasury at his death?

At someone says the State provided him with an opportunity to make that money!

Humph! The State did nothing of the kind. On the contrary, John J., instead of being in debt to the State, was the State's benefactor and helper. He paid large taxes. He gave employment. He provided business leadership. He should get private charities and public life.

Now the line he paid "tribute" for the privilege of "private charity" and public life. He is operating his business and giving work to men and women and generously contributing to the maintenance and improvement and expansion of his city, his province and his country. Then, dying, he is expected to disgorge thousands more for public purposes—Windsor Star.

Durable World Peace

President Roosevelt Says Maintenance Of Democracy The Best Guarantee

Continued maintenance and improvement of democracy, mutual confidence and positive co-operation form the most important guarantees of a durable world peace, President Roosevelt said at addressing the governing board of the Pan-American Union of 21 American Republics in observance of Pan-American Day. "Democracy can not thrive in an atmosphere of international insecurity," he said. "Such insecurity breeds militarism, regimentation and the denial of freedom of speech, of peaceful assemblies and of religion. Such insecurity challenges the ideal of democracy based on the free choice of government by the people themselves."

"And as a logical development of the American belief that the continued maintenance and improvement of democracy constitute the most important guarantee of international peace."

Ancient Fossils

Discovery in South America of fossils and skeletons of hitherto unknown animals which perished in quicksand and were buried 17,000 years ago was announced by the Harvard museum of comparative zoology.

King Henry VI. Instituted Rites in 1440 as a preparatory school for King's College, at Cambridge.

New Canadian Coins

Series, Ranging From One Cent To One Dollar To Be Issued

A new series of Canadian coins will be minted this year, with the likelihood of getting into circulation shortly after the coronation. Finance Minister Charles Dunning announced at Ottawa. The denominations will range from one cent to one dollar.

Master die and punches of the obverse and reverse of the coins will be made by the Royal Mint at London. George VI, modelled by T. H. Paget of the royal mint, London, are expected here shortly.

The new coins will represent the collaboration of Canadian, British and French mints. Due to pressure of work on the royal mint in London, it was found necessary for the Canadian authorities to enlist co-operation of the Paris mint in the preparation of some of the dies.

The obverse of all the coins will be King George's effigy, but the reverse will vary. A list of the reverse designs follows:

One dollar: A cent surrounded by an Indian and a voyageur, an tablet in the background; above, the word "Canada" with the northern lights; below, the word "Solace" and the date of the year, with a graining upon the edge.

Twenty-five cents: A caribou head, a King George's effigy, but the reverse will vary. A list of the reverse designs follows:

Ten cents: A fishing schooner at sea, "Canada" above and "10 cents" below, with the date of the year, and a graining upon the edge.

Five cents: A beaver; above "5 cents" between two maple leaf, and "Canada" and the date of the year, with a plain edge.

One cent: A two-leaved twig of a "one cent" between the maple leaf, and "Canada" and the date of the year, with a plain edge.

Came At Right Time

Committees Should Take Advantage Of Home Improvement Plan

It has been said that one of the aspects of the Home Improvement Plan which is now being promoted throughout the length and breadth of the Dominion will be to develop "home consciousness" in the people. A combination of circumstances, two of which might be mentioned as raising the popularity of the plan, are four or five years of depression, have been responsible for many cases of lack of attention to home comforts and home surroundings. It is an accepted fact that at the present time, thousands of homes in Canada require renovation and repair.

The Home Improvement Plan has come along at a time when it is most needed and those in the building and supply trades should be quick to take advantage of this opportunity. It is because employment in the construction and allied businesses has lagged that the Dominion government has agreed to make easy the borrowing of money for home improvement purpose. Because of the ramshackle condition of the housing provision of employment it is believed that if these trades become active a large number of men at present out of relief will be able to go to work.

Communities which give the most whole-hearted support to the Home Improvement Plan will reap the greatest benefits—Woodstock Sentinel-Review.

The House Of Rothschild

Treasures Belonging To Famous Family To Be Sold

Treasures of the famous house of Rothschild, noted for its vital role in the financial history of Europe, will go under the auctioneer's hammer. Victor Rothschild, son of the first Lord Rothschild's second son, is present owner of the greatest residence in London, but since his major interest in science, he prefers to live near Cambridge University, and disposing of the family treasures.

Race Rights On Highway

A cow is entitled to eight feet of highway—just as much as an automobile—Mr. Justice A. Priest ruled in a case decided in a court in Montreal called by Gagnon Chapin, a motorist, against John J. Good. The cow was driven off the highway struck last summer. The automobile was damaged and the cow killed.

Great Britain and Ireland have four telephones to every 100 persons, or a total of 1,969,897 instruments.

An average of four earthquakes occur daily in Japan.

SHIRTING ADDS TOUCH OF BRISKNESS TO WIN-SOME AFTERNOON STYLE

By Anne Adams

We keep thinking about those Anne and Monette farmers in Pennsylvania who travelled down to Washington to ask the Government not to help their community build a \$125,000 PWA consolidated school.

They don't believe in borrowing money, or taking it as a gift, even from the Government. They have nobody on relief in their township, and they don't want anybody to go on relief. They are not interested in convenience, pleasure automobiles, radio, movies. They don't want their children riding in buses to a consolidated school—would rather have them walk to old-fashioned schools nearer their homes, because the children "will grow up to be farmers and they must have strong legs."

We keep smiling at the quaintness of such notions. Those Amishmen and Monettes, clinging to strict observance of ancient beliefs, are depriving themselves of so many modern advantages. The more progressive rest of us can't help feeling a little sorry for them, as well as amused by them. And yet, while in Washington, they seemed very cheerful. They kept smiling and their smiles were broadcast when they started home. It suggests a faintly disturbed thought.

Maybe they think we're funny, too—New York Times-Telegram.

"Perhaps this charming Miss B. looking at her engagement book. For anyone who wears such a charming frock as hers, she will be one of the popular girls in town! Anne Adams knows how British girls like to wear shirring. And these of Pattern 4366 are distinguished by two rows of easy-to-shirring. Can't you picture yourself in the demure, round neckline that's just unusual and simple (also accentuated by shirring) and a simple cut bodice? Don't miss the way the skirt flares outward in full, flared fashion, or the dainty puff of flared sleeves. You've made selections of fabrics—among them are satin, silk, rayon, synthetic, or silk crepe."

Pattern 4366 is available in sizes 12, 14, 16, 18, 20, 22, 24, 26, 28, and 30. Size 16 takes 3 1/2 yards 20 inch fabric. Illustrated step-by-step sewing instructions included. The Sew Twenty cents (100c) in coin or stamps (coin preferred). For the Anne Adams pattern. Write plainly name, address and style number, and send order to the Anne Adams Pattern Dept., The Newspaper Union, 175 McDermott Ave. E., Winnipeg.

Founded Junior Red Cross

Outstanding Worker For Many Years Dies In Montreal

Mary M. Phillips, 81, founder of the Junior Red Cross Society, died recently in Montreal.

An outstanding Red Cross worker, when the first Canadian branch was formed in 1900. Miss Phillips later started spreading its ideals among children, and after the world war founded Greenfield Park Junior Red Cross Society in Montreal which became the nucleus for the organization since spread to 53 centres.

In 1921 she received an honorary citizenship—highest award of the organization, and two years ago the King's birthday medal. A few years ago the American Red Cross Society honored Miss Phillips at Washington for her work on behalf of the Junior Red Cross.

Notion May Be Quaint

But Monettes Will Not Accept Help From Anyone

We keep thinking about those Anne and Monette farmers in Pennsylvania who travelled down to Washington to ask the Government not to help their community build a \$125,000 PWA consolidated school.

They don't believe in borrowing money, or taking it as a gift, even from the Government. They have nobody on relief in their township, and they don't want anybody to go on relief. They are not interested in convenience, pleasure automobiles, radio, movies. They don't want their children riding in buses to a consolidated school—would rather have them walk to old-fashioned schools nearer their homes, because the children "will grow up to be farmers and they must have strong legs."

We keep smiling at the quaintness of such notions. Those Amishmen and Monettes, clinging to strict observance of ancient beliefs, are depriving themselves of so many modern advantages. The more progressive rest of us can't help feeling a little sorry for them, as well as amused by them. And yet, while in Washington, they seemed very cheerful. They kept smiling and their smiles were broadcast when they started home. It suggests a faintly disturbed thought.

Maybe they think we're funny, too—New York Times-Telegram.

Making Long Trip

Paused Glacier Priest Will Seek For Lost Ship

A 65-year-old Priest will seek for a lost ship on an expedition to the far north to seek in the blubber of a walrus a preventative for tuberculosis.

Rev. Harold H. Hubbard, famed "Glacier Priest," explorer, author and lecturer, said he would make his 11th northern expedition—this time to King Island in the Bering Sea. The trip will last a year and a half.

"We know," said the priest, "that the Russians took the White Plague to the Yukon. Approximately 25 percent of them are afflicted. Yet, through the profuse use of seal oil, they prolonged their lives indefinitely."

"It is our hope to find the specific or the preventative by using 100 tubercule-infected Eskimos in experiments. Dr. Victor Levine, nutrition scientist at Creighton University (Omaha, Neb.), will accompany me. He already has isolated vitamin D from the seal oil. Obviously, there are other fats or oils that have a beneficial effect on lung tissue."

Kindness In Social Service

Says Twenty Per Cent Of People In England Are Underfed

Dr. Francis Poulton, high commissioner for the United Kingdom, told the annual meeting of the Victoria Order of Nurses' board of directors 20 per cent of the people in England are underfed and 25 per cent of the families in England live in one room.

He said the V.O.N. provided the personal touch of sympathy and kindness in social service nursing and added:

"Social obligations do not end when we pay our taxes. There should be personal and voluntary contributions to try to help along our fellow men and women who lack some of the things of life we are fortunate enough to enjoy."

Welcomed In Japan

Helena Keller Greeted Of Emperor At Imperial Garden Party

Helena Keller, famous blind educationist, received a overwhelming greeting at Yushima as she set sail for the first time on Oriental sea.

Seven Japanese peers, headed by Prince Iyasato Tokugawa, former president of the House of Peers, and heads of local institutions and educational and philanthropic organizations were among the notables meeting her. Miss Keller will lecture and introduce a newly-developed "talking book" into Japan, which has 200,000 blind persons.

Miss Keller was among Emperor Hirohito's guests at the annual imperial cherry blossom garden party.

Appeals To Queen

Mrs. Alice Harrett, 26, of London, appealed to Queen Elizabeth by letter to mend her husband back from Singapore, where he was ordered as a soldier three days after their marriage last year. He is due to remain at Singapore, until 1942.

"I know you will understand how much I want to have a husband to love and make a home for," wrote Mrs. Harrett.

Lost For Forty Years

A silver cup presented to the Royal Nautical Club by King George V. was found after 40 years' disappearance. The cup disappeared in 1867. Recently a museum in Canada covered it in a Cardiff jewelry shop.

Latest relic from Egypt is a jar of face cream made about 3,000 years old. The glass jar was a wrinkle or two even in those days—and wrinkles to old wrinkles, as it were.

Several Explanations

Why Many People Read Bible Less Than Formerly

The Bible has often been called the world's best-seller. An English author-revivalist now makes the bitter comment that "it is sold but not read."

While that is not literally true, there is far less reading of the scriptures by the general public than in the past. The Bible was a generation ago, and still less than there was in the days of our Puritan ancestors, who found in the Bible a life in less than now from fertility.

The increase in the amount of secular literature available to the mass of readers, and the recent decline in religious sentiment among great bodies of people, explain why the Bible is read less now than formerly.

Whether the Bible is less read, or people are less religious because the Bible is less read, we do not presume to say, but it is quite obvious that the public reading has fallen off, and the ethics and morals of the Nation also have slumped—Detroit Free Press.

Airplanes Of The Future

Visions As Flying Wings Without Tail

The airplane of the future was seen as a "flying wing," tail-less and without a fuselage.

Such a ship weighing between 400 and 500 tons and capable of a speed of over 300 miles an hour was envisioned by Lawrence D. Bell, president of an airplane manufacturing firm in Buffalo.

He said: "The designers and engineers will be able to shift forward into the wing, eliminating the fuselage, which is a parasitic resistance anyway. The wing will be cut back to form a 'V'."

Future ships will be powered by jet engines, he predicted, and a safety factor which would "make people remember present-day crashes as a page from the dark ages."

He said he believed economy in operation of the big liners would put the dirigible "entirely out of the picture."

Kindness In Social Service

Says Twenty Per Cent Of People In England Are Underfed

Dr. Francis Poulton, high commissioner for the United Kingdom, told the annual meeting of the Victoria Order of Nurses' board of directors 20 per cent of the people in England are underfed and 25 per cent of the families in England live in one room.

He said the V.O.N. provided the personal touch of sympathy and kindness in social service nursing and added:

"Social obligations do not end when we pay our taxes. There should be personal and voluntary contributions to try to help along our fellow men and women who lack some of the things of life we are fortunate enough to enjoy."

To Chart Sea Floor

San Francisco City Searching For Submarine Ridge Near Norway

A ship-anchoring station for the San Francisco society helms, Miss Louisa A. Boyd, who already has locations from her own expeditions. Her next expedition, she planned a new expedition.

She will sail from a Norwegian port, and will be accompanied by a chart the sea bottom, north of Norway, and determine whether there is a submarine ridge connecting Greenland and Spitzbergen.

Miss Boyd will serve as photographer. On one of her five previous major expeditions, she bagged 13 Polar bears and was on a hunting expedition aboard explorer Roald Amundsen's former supply ship, the Hobbay, when the Italian dirigible Italia, with Amundsen and a crew of 22 men, crashed in 1912.

Miss Boyd spent months searching for the victims.

Miss Boyd was the first of her sex to sail upon domestic trans-Pacific land.

Would Make Another Fight

Professor Picard Is Trying To Get Financial Backing

Professor Augustus Picard, "stratosphere pioneer" visiting in Denmark, announced he was planning a new flight which he hopes to reach a height of thirty kilometers. He estimated the cost of the proposed flight at \$60,000, but said he had not yet been able to find financial backing.

"I am perfectly willing to perform this flight in co-operation with a business man," Professor Picard declared, "and in return for the money I have no objection to advertising his name." But I cannot accept an offer from a firm which produces liquor or tobacco. Any other firm dealing in soap, automobiles, vacuum cleaners, or whatnot will do."

The capital in Washington, D.C., required 70 years to complete.

Gardening

It is a good plan to use started annual flower plants secured from any seed store, greenhouse or nursery for planting among tulips and other early spring flowers. They will be past their best in a few more weeks.
